SUBJECT INDEX

- Absorption by plants—
 - calcium, 242, 301
 - iron, 201
 - magnesium, 301
 - phosphorus, 72, 102, 301
 - potassium, 73, 102, 162, 240, 301
 - radioactive elements, 173-185
 - sodium, 240
- Actinomycetes in rhizosphere, 399
- Adobe, chemical and physical characters, 214-217
- Adsorption by—
 - colloids, 121-137
 - kaolinite, of phosphates, fluorides, 268
- Aggregates—
 - classification, 199
 - physicochemical aspects, 469-480
 - size distribution in soils, 53
 - stability, as affected by—
 - organic liquids, 471
 - swelling, 476
 - toluene, 475
 - wetting, 474
- Aggregation—
 - as affected by—
 - casein, 385
 - lignin, 384
 - lime, 384
 - microorganisms, 381-394
 - organic matter, 55-56, 387, 389
 - protein, 384
 - in soils—
 - cultivated, 52
 - gray-brown podzolic, 47-58
 - prairie, 47-58
 - virgin, 52
- Anion replacement, 263-275
- Anorthite, weathering, 291
- Availability—
 - concepts of, 105
 - criterion of yields, 105
 - of nutrients in soil, 141
- Bacteria—
 - activity in eroded soils, 31-46
 - carbon dioxide evolution by, 38, 276
 - growth on synthetic soil, 121-130
 - numbers, as affected by—
 - borax, 278
 - colloids, 127
 - cornstalk, 41-44
 - lime, 278
 - phosphorus, 130
 - potassium, 130
 - numbers in soil, 37, 41, 361
 - survival in alkali soils, 359-364
- Base-exchange capacity of—
 - adobe, nonadobe soils, 214
 - Albia soil, 51
 - Clinton soil, 35
 - Penn soil, 251
 - soil, as affected by—
 - ammonium sulfate, 251
 - dried blood, 251
 - manure, 251
 - sodium nitrate, 251
 - Weller soil, 51
 - West Java soil, 101
- Bentonite—
 - and cation saturation, 129
 - use in synthetic soil, 121-136
- Books, *see* end of letter B
- Boron—
 - availability in orchard soils, 146
 - determination in soils—
 - total, 354
 - water-soluble, 355-356
 - effect on—
 - bacterial activity, 275-282
 - carbon dioxide evolution, 277
 - fungi, 278
 - sunflower yields, 144-146

- Calcium—**
 calciphilic, calciphobic plants, 297–307
 carbonate, effect on—
 bacterial numbers, 275
 carbon dioxide evolution, 275
 fungi, 275
 stability of soil aggregates, 217–218
 content of plants, 301–302
 exchangeable, in—
 adobe soils, 214
 orchard soils, 142
 Penn soil, 256
 nitrate, effect on yield of barley and vetch, 148
- Carbon—**
 content of soil, 35, 39, 53, 214, 230
 dioxide evolution from soils, 38, 41–44, 277–278
 effect on bacterial growth, 132
 nitrogen ratio of soil, 35, 340, 441
 Colloidal acids, organic, effect on anorthite weathering, 291–295
- Colloids—**
 effect on bacterial growth, 126
 soil, effect on plant growth, 283–289
 Cover crop yields, barley and vetch, 148–149
- Culture solutions—**
 effect of volume rate on deficiency symptoms, 229–233
 potash deficiency in clover, 231
- Electrodialysis, *see* Soil**
- Electron microscope—**
 study of shape of clay particles—
 dickite, 483
 kaolinite, 485
 montmorillonite, 483
 technique, 481–483
- Erosion—**
 chemical changes produced by, 35, 435–443
 microbial activity in eroded soil, 31–46
 organic matter changes, 435–443
 wind, effects of—
 soil flow, 424
 surface roughness, 419–422, 423
 wind velocity, 426
- Foliar diagnosis and soil heterogeneity, 455–468**
- Forest soils, revised nomenclature, humus layers, 87–92**
- Fungi—**
 growth as affected by borax, 275
 in rhizosphere, 402
- Humic acid, effect on anorthite weathering, 293**
- Humus—**
 definition, 89
 layers in forest soil, 87–92
 types—
 mor, 89–91
 mull, 89–91
- Hydrogen—**
 exchangeable in—
 adobe, nonadobe soils, 214
 Albia soil, 51
 Clinton soil, 35

- Hydrogen—
 exchangeable in—(*continued*)
 Penn soil, 256
 Weller soil, 35
 ion concentration—
 adaptation of wheat, 59-61
 as affected by nitrogen sources, 253
 changes in soil by erosion, 35
 effect on nutrient absorption, 297-305
 of soils, 35, 56, 214, 256, 309-333
 Iodine content of—
 rocks, 367
 soils, 365-371
 Leaf analysis—
 as affected by—
 phosphorus, 76
 position of leaf, 67-69
 of apple, 163
 plant nutrition and, 63-81
 Lime, effect on—
 adobe structure, 217
 carbon dioxide evolution, 277
 growth of bacteria, fungi, 278
 plant composition, 297-305
 Magnesium, in—
 adobe, nonadobe soils, 214
 calciphilic, calciphobic plants, 300-302
 Penn soil, 256
 Manure, effect on—
 barley, vetch yields, 148
 exchange capacity and bases, 254-256
 exchangeable potassium, 159
 potassium content of apple leaves, 162
 Moisture—
 apparatus for measuring capillary rise, 9
 capillary rise and movement in sands, 1-14
 content of soil after rain, 448
 equivalent, relation to field capacity, 445-450
 soil, effect on hydrogen-ion concentration, 309-333
 Neutralization curves in soil classification, 335-349
 Nitrate—
 content of soil, 190
 determination by photoelectric colorimeter, 185-191
 production in alkali soil, 361
 Nitrite production in alkali soil, 361
 Nitrogen—
 content of plants, 69, 71, 76, 301
 content of soil, 35, 249, 340, 439
 excretion by legumes, 15-23
 fixation in alkali soils, 361
 losses in drainage waters, 78
 Orchard soils, potassium status, 155-165
 Organic matter—
 balance in soil, 253
 effect on—
 aggregation, 55
 carbon dioxide evolution, 42-43
 exchangeable ions, 158, 257
 relationship in soils, 340
 soil crushing strength, 218
 losses by erosion, 440
 proximate analysis, 441
 Petrographic analysis, method for soil, 451-454
 Plant by-products, effect on microorganisms, 395
 Phosphorus—
 adsorbed, replacement, 263-273
 available in soil, 142
 availability in tropical Java soil, 101-120
 content of—
 plants, 69-73, 301
 soil, 142
 electrodialyzable, in soil, 256
 fixing capacity of soil, chemical, biological methods for determining, 179
 radioactive, retention by soil, 173-185
 Potassium—
 available, in orchard soils, 155-166
 content of plants, 163, 301
 effect on white clover, 229-233
 exchangeable, in soil, 142, 159, 256
 Neubauer values, 161
 Rhizosphere—
 bacterial population, 398
 fungus population, 399
 Root distribution in orchard soils, 140
 Rubber, growth rate, 75
 Sodium—
 exchangeable, in Penn soil, 256
 importance for plant nutrition, 237-244, 373-379
 nitrate, effect on beet yields, 375
 Soil—
 adobe, chemical and physical characters, 214-217
 adsorption by, colloids, 121-137
 aggregates, *see* Aggregates
 aggregation, *see* Aggregation
 bacterial activity in eroded, 31-46
 boron availability, 146
 calcium, exchangeable, 142, 214, 256

Soil—(continued)

- carbon content, 35, 39, 53, 214
- carbon-nitrogen ratio, 35, 340, 441
- clay particles, shape, 481-483
- colloidal humic acid, 291-296
- dispersion, relation to dielectric constant and dipole movement, 471
- electrodialysis, 256
- equiionic, pH, 344
- erosion, *see* Erosion
- exchange capacity, *see* Base Exchange
- forest, *see* Forest soils
- hydrogen-ion concentration, *see* Hydrogen-ion concentration
- iodine content, 365-371
- lime, effect on adobe structure, 217
- mechanical analysis, 470
- minerals, apparatus for separation, 167-169
- mineralogical analysis, 167-169
- moisture, *see* Moisture
- neutralization curves, 335-349
- nitrate content, 190
- nitrogen content, 35, 249
- petrographic analysis, 451-454
- physical properties, 140, 158, 470
- series, analyses, descriptions of, or experiments with—
